

2026 CFA Program Level I Candidate Notice

30 SEPTEMBER 2025

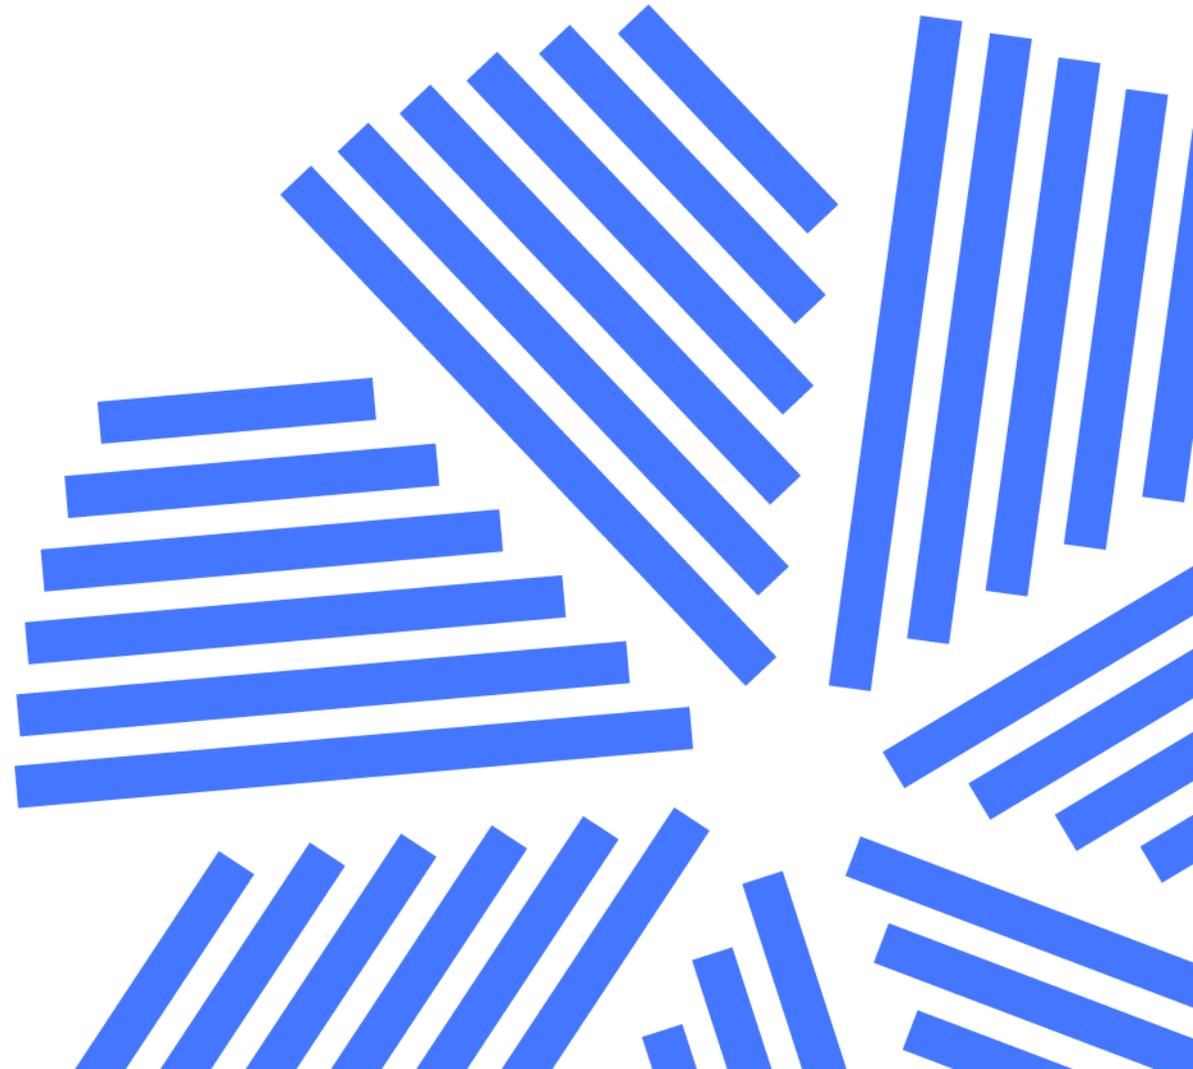

This document outlines the errors submitted to CFA Institute that have been corrected.

Due to the nature of our publishing process, we may not be able to correct errors submitted after 1 September 2024 in time for the publication of the following year's print materials. We do make it known in this notice when changes have been published in the curriculum and when they are still pending corrections. We release a new notice every two weeks.

We recommend checking either the LES or this document regularly for the most current information. Depending on when you purchase the print materials, they may or may not have the errors corrected.

Quantitative Methods

Rates of Return

Revised Date	Location	Page(s)	Replace	With
22 August 2025	Second paragraph	10	Using Equation 4, we can calculate the geometric mean return from the same three annual returns:	Using Equation 3, we can calculate the geometric mean return from the same three annual returns:
18 August 2025	Solution to Example 2	11	C is correct. Applying Equation 2, the holding period return is -10.1 percent, calculated as follows:	C is correct. Applying Equation 1, the holding period return is -10.1 percent, calculated as follows:
20 August 2025	Exhibit 3 Title & Table	11	Exhibit 3: Mutual Fund Performance, 20X8–20X0 20X0	Exhibit 3: Mutual Fund Performance, 20X8–20Y0 20Y0
18 August 2025	Solution to Example 4	12	A is correct. Applying Equation 4, the fund's geometric mean return over the three-year period is 0.52 percent, calculated as follows:	A is correct. Applying Equation 3, the fund's geometric mean return over the three-year period is 0.52 percent, calculated as follows:
14 August 2025	Paragraph and equation after Example 6	16	Because they use the same data but involve different progressions in their respective calculations, the arithmetic, geometric, and harmonic means are mathematically related to one another. We will not go into the proof of this relationship, but the basic result follows: Arithmetic mean \times Harmonic mean = (Geometric mean) ² .	Because they use the same data but involve different progressions in their respective calculations, the arithmetic, geometric, and harmonic means are mathematically related to one another. We will not go into the proof of this relationship, but the basic result follows: Arithmetic mean \times Harmonic mean = (Geometric mean)².

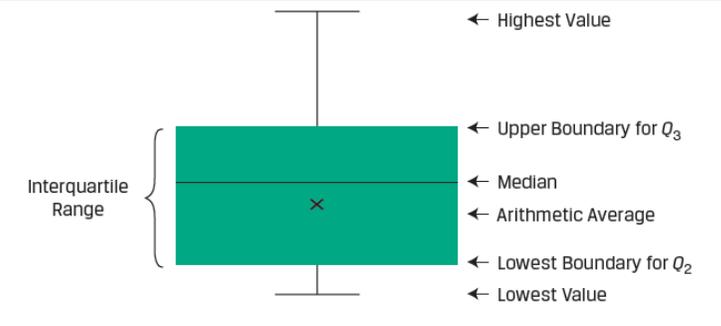

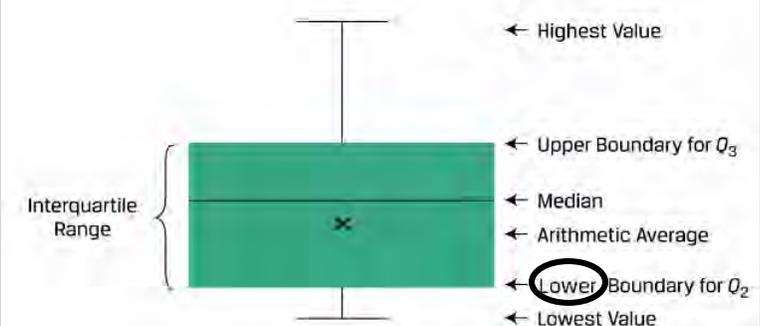

Rates of Return

22 September 2025	Equation 8	143	<p>This is the total probability rule in action. Now you can answer your question by applying Bayes' formula, Equation 8:</p> <p>$P(\text{EPS} \text{ " " exceeded" " consensus \ DriveMed" " expands})$</p>	<p>This is the total probability rule in action. Now you can answer your question by applying Bayes' formula, Equation 8:</p> <p>$P(\text{EPS exceeded consensus DriveMed expands})$</p>
30 September 2025	Example 4 – Question 1	144	<p>1. What is your estimate of the probability $P(\text{EPS exceeded consensus DriveMed expands})$</p>	<p>1. What is your estimate of the probability <math>P(\text{EPS <i>met</i> consensus DriveMed expands})</math></p>

Portfolio Mathematics

Revised Date	Location	Page(s)	Replace	With
2 September 2025	Equation 2	153	$\sigma^2(R_p) = E\{[R_p E(R_p)]^2\}.$	$\sigma^2(R_p) = E[(R_p - E(R_p))^2].$
2 September 2025	Equation 5	154	$\begin{aligned} \sigma^2(R_p) &= E[(R_p - E(R_p))^2] \\ &= E\{[w_1 R_1 + w_2 R_2 + w_3 R_3 - E(w_1 R_1 + w_2 R_2 + w_3 R_3)]^2\} \\ &= E\{[w_1 R_1 + w_2 R_2 + w_3 R_3 - w_1 E R_1 - w_2 E R_2 - w_3 E R_3]^2\}. \end{aligned}$	$\begin{aligned} \sigma^2 &= E[(R_p - E(R_p))^2] \\ &= E[(w_1 R_1 + w_2 R_2 + w_3 R_3 - E(w_1 R_1 + w_2 R_2 + w_3 R_3))^2] \\ &= E[(w_1 R_1 + w_2 R_2 + w_3 R_3 - w_1 E R_1 - w_2 E R_2 - w_3 E R_3)^2] \end{aligned}$
22 August 2025	Equation below Exhibit 3	155	$\sigma^2(R_p) = w_1^2 \sigma^2(R_1) + w_2^2 \sigma^2(R_2) + w_3^2 \sigma^2(R_3) + 2w_1 w_2 \text{Cov}(R_1, R_2)$	$\sigma^2(R_p) = w_1^2 \sigma^2(R_1) + w_2^2 \sigma^2(R_2) + w_3^2 \sigma^2(R_3) + 2w_1 w_2 \text{Cov}(R_1, R_2)$
18 August 2025	Last sentence in paragraph starting with "For example, given independence,"	163	The following condition holds for independent random variables and, therefore, also holds for uncorrelated random variables.	The following condition holds for independent random variables and, therefore, also holds for uncorrelated random variables, since for two variables $E(XY) = E(X)E(Y) + \text{Cov}(X, Y)$, and when the variables are uncorrelated, $\text{Cov}(X, Y) = 0$.

Estimation and Inference

Revised Date	Location	Page(s)	Replace	With
22 September 2025	Solution to Question 1	210	Option 2: Apply the bootstrap method to construct the sampling distribution of the sample median, and then compute the standard error using Equation 7.	Option 2: Apply the bootstrap method to construct the sampling distribution of the sample median, and then compute the standard error using Equation 4 .

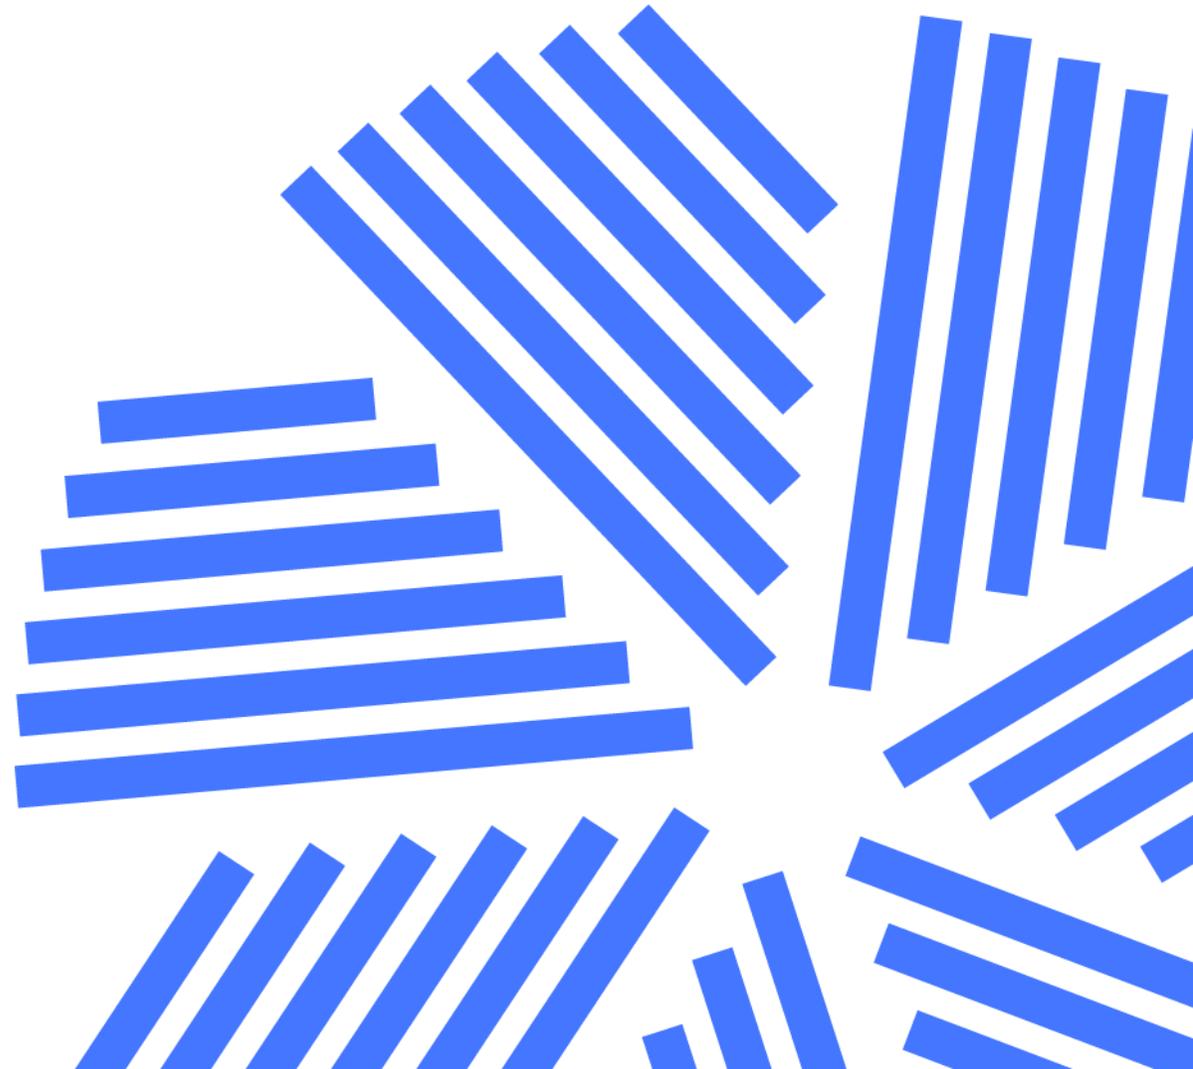

Hypothesis Testing

Revised Date	Location	Page(s)	Replace	With
18 September 2025	Learning Module Overview	216	To determine whether the difference between two population means from normally distributed populations with unknown but equal variances, the appropriate test is a t-test based on pooling the observations of the two samples to estimate the common but unknown variance. This test is based on an assumption of independent samples.	To determine whether the difference between two population means from normally distributed populations with unknown but equal variances is significant , the appropriate test is a t-test based on pooling the observations of the two samples to estimate the common but unknown variance. This test is based on an assumption of independent samples.
26 August 2025	Solutions, Solution 10	241	B is correct. The level of significance is used to establish the rejection points of the hypothesis test. A is correct because the significance level is not used to calculate the test statistic; rather, it is used to determine the critical value. C is incorrect because the significance level specifies the probability of making a Type I error.	B is correct. The level of significance is used to establish the rejection points of the hypothesis test. A is incorrect because the significance level is not used to calculate the test statistic; rather, it is used to determine the critical value. C is incorrect because the significance level specifies the probability of making a Type I error.

5 August 2025	Paragraph above Example 6	433	An issuer rating usually applies to its senior unsecured debt and addresses an obligor's overall creditworthiness. On the other hand, an individual issue rating refers to specific financial obligations of an issuer and takes such factors as seniority into account.	An issuer rating addresses an obligor's overall creditworthiness. Rating agencies typically map it to the senior-unsecured debt level for consistency across issuers. On the other hand, an individual issue rating refers to specific financial obligations of an issuer and takes such factors as seniority into account.

26 September 2025	Question 3	199	<p>Which of the following statements correctly describes a synthetic protective put position according to put–call forward parity?</p> <p>A.A long forward contract on the underlying, a long put option on the underlying, and a short risk-free bond</p> <p>B.A short forward contract on the underlying, a long put option on the underlying, and a short risk-free bond</p> <p>C.A short forward contract on the underlying, a short put option on the underlying, and a short risk-free bond</p> <p>Solution:</p> <p>A is correct. The formula for put–call forward parity is as follows: $F_0(T)(1 + r)^{-T} + p_0 = c_0 + X(1 + r)^{-T}$. Rearranging the terms as follows shows the synthetic protective put position on the left-hand side of the equation: $F_0(T)(1 + r)^{-T} + p_0 - X(1 + r)^{-T} = c_0$.</p>	<p>Which of the following statements correctly describes a synthetic protective put position according to put–call forward parity?</p> <p>A.A long forward contract on the underlying, a long put option on the underlying, and a long risk-free bond</p> <p>B.A short forward contract on the underlying, a long put option on the underlying, and a short risk-free bond</p> <p>C.A short forward contract on the underlying, a short put option on the underlying, and a short risk-free bond</p> <p>Solution:</p> <p>A is correct.
